

Inline-Skating

Inline-Skating bietet viele Möglichkeiten, den Sportunterricht mit Spiel und Spass attraktiv zu gestalten.

Curve runs, pirouettes, jumps, trick riding and inline hockey make inline skating an extremely interesting and varied lesson content. Coordinated skills are addressed and improved, the condition can be promoted in a joint-friendly way.

Important

- Tape light-reflective strips to the skates at the back and front. At night, carry a white light shining to the front and a red light shining to the back that can be easily seen. This can be attached to the clothing.
- Only ride on traffic-free squares, on sidewalks, pedestrian and bicycle paths.
- Ride on side streets with low traffic volume only if there is a lack of sidewalks, as well as pedestrian and bicycle paths along the road.
- Respect the signal "prohibition for vehicle-like devices" and respect the "prohibition for pedestrians"
- Brakes and "crumple zone" are an important part of accident prevention! Make sure elbow and knee pads are stockinged.
