Steve the Parrot

Steve the parrot is happy with every turn more, but before Steve can fly off he must be wound up once released he works like a big flywheel. Depending on the length of the thread and the thickness of the paper, it can even fly for quite a while

Material

- 1x round wood (20x100mm)
- 1x black clay paper
- div. colored paper
- Felt tip pen (for the face)
- Scissors or cutter
- Drill or drill

Building instructions

Transfer the body onto black paper and cut it out.

||

Transfer the rest of the body parts onto colored 120 gram paper or print them out and glue them onto the body.

||

Finally, paint the face and cut a hole for the round wood (20x100mm) into the body and glue the round wood.

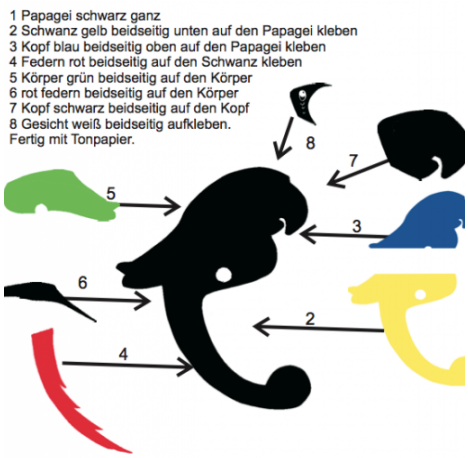

||

Drill holes in the round wood. Now thread the threads through the holes in the roundwood and knot them.

||

Note: If the parrot is to be made for several children, it is best to make a template for each body part.
